Emergency SOS Pillar made of GRP (glass reinforced polyester) designed for Roads & Motorways mod. TLB-560-A1

ROADCALL®

Material: GRP Glass Reinforced Polyester
Protection : IP66
Shocks resistance: IK08
Operating temperature: -40°C ÷ +70°C
Color: orange RAL2003
Dimensions : 1850 x 350 x 420 mm
Weight: 35 kg
Fixing: on the floor

ROADCALL® TLB560 is a **Glass-Reinforced-Polyester (GRP)** pillar designed for installation along **Roads & Motorways**. GRP is a **very robust material**, with high mechanical resistance jointed to a **very long life** when exposed to **hard weather conditions**, including marine salt atmospheres.

It is normally supplied in **orange RAL2003** color, but it can be manufactured in **any color** on demand.

Its simple design, without sharp edges, responds to the **European Safety Recommendations** and to the **main safety rules in the whole world**.

The front pivoting plate, is designed to receive any **Emergency & Service telephone** series **STEELVOX®**, including a very wide range of different models.

The front plate with integrated telephone can be substituted in less than a minute, **reducing the presence of maintenance personnel** in site during reparations. The lower pivoting plate, is the access to the cable terminals and auxiliary accessories area. This space is suitable for containing **auxiliary circuits** and devices (switches, power suppliers, terminals, batteries, etc.).

ROADCALL® can be equipped with **flashing lamps** (LED or Xenon) on the front and on the rear side, powered by telephone line ore by auxiliary voltage 12Vdc or 230Vac.

It is normally equipped with **symbols** and **pictograms** accordingly to the customer specification and/or to the local National rules. It can be associated with a **solar-panel**, to enable installation in rural areas where traditional power-sources are not available.

All the emergency telephones series **STEELVOX®** are available to work through the main existing telecom networks, including **PSTN** (Analogue), **VoIP** (SIP), and **GSM**.

ROADCALL® is just one of the professional products we realize in the area of **SOS communications for roads and motorways**.

Our product range is constantly evolving, to cover the most stringent requirements and the latest industry standards.
